Bulgin extends Buccaneer® SMB Antenna range

Bulgin – an Elektron Technology connectivity brand – has launched an environmentally-sealed 90° SMB Antenna, offering greater flexibility in systems design for RF monitoring and control.

Complementing the existing IP68-rated SMB Antenna, this new option is available to suit a variety of frequency bands – 2.4 GHz, 440-470 MHz and 900/1,800/1,900 MHz – and can be combined with the PX0414 SMB Buccaneer panel mounting connector to provide a completely waterproof and dustproof option for RF equipment.

David Luu, Product Marketing Analyst for Elektron, commented: “The Buccaneer SMB series of waterproof antennae has been developed to offer robust, hassle-free operation for industrial, scientific and medical instrumentation – as well as for smart meters, base stations and outdoor hotspot installations for wireless LAN, GSM and Bluetooth – ensuring exceptional performance and maximum system gain. This new option will simplify instrument design, helping to ensure straightforward installation and reliable operation for virtually any application.”
